

TOO MANY BONES

A DICE BUILDER RPG

Rulebook
Version 1.0.2

A Note From Josh & Adam:

Too Many Bones has been a humbling endeavor for us both. Never before have we experienced this level of support and encouragement throughout the game-making process. Our backer community support has been second to none and has fueled us to make this game stand out in every way possible. Everyone involved has given more effort than we were ever expecting. We want to personally thank our artist, Anthony LeTourneau; our writer, James Boutilier; our jack of all trades and social media man, Josh Wielgus; and an orc horde of others who donated their time and talents to proof and playtest this unique take on dice strategy. We hope the amount of care and attention to detail invested into this game is apparent. It remains our goal to steadily improve the quality standard for board gaming. We think this game sets the bar high. Enjoy!

Disembarkment Notice:

In *Too Many Bones*, you are playing as an unusual race of adventurers headed into a land overrun by all sorts of hostile creatures. Your race has lived hidden in the Deepwood for centuries, and only recently, your kin have been forced to emerge to the south and take shelter within the walls of Obendar.

Due to your reclusive lifestyle, many in town are encountering your race for the very first time. Some locals believe you to be an elf, due to your distinct facial features; others would say a goblin, from your size and build. Others still would insist your high technological aptitude proves you a gnome! Only those most intimate with the Deepwood know your true kind and kin as Gearlocs -- big-eared, thin-bodied creatures with conflicting loves of nature and machine and an insatiable thirst for adventure!

The elder Gearlocs know all too well that this growing danger to the north is the work of The Ebon, a melting pot of lawless creatures ruled by tyrants who hold a firm grasp on all the northern regions of Daelore. Because each of these regions has little to no communication with the next, the elders believe that a smaller party will be most effective at infiltrating and eliminating the threat. They have selected your party of adventurers and tasked them with venturing northward to silence the Ebon one tyrant at a time.

This was never to be your task alone! Others were sequestered! But the Obendar militia is thin in ranks, and any sellswords worth hiring have already been swayed by the promise of plundering rights if they aid the enemy. But no matter! For you are Gearlocs, and being the resourceful and fearless race that you are, your party has happily accepted this challenge! You will be among the first to travel north in many decades, and your adventure begins today!

x12 Atk Dice

x18 Def Dice

x4 Lockpicking Dice

Round Counter

x4 Dice Storage Trays

Marker

x5 Reference Sheets

OBJECTIVE

Game Objective

Your task is easy...according to the Gearloc Council. Reach and defeat the selected Tyrant within its day allotment to win.

GAME SET-UP

Let's start by setting up for your adventure. Place the Battle Mat in the center of your play area.

Tyrant and Day Counter

Select a Tyrant based on the length of game you'd like to play, or draw one at random (you may look at both sides and familiarize yourself with its Skills and Tyrant Die effects). Games can range from 1-4 hours depending on the Tyrant and number of Gearlocs. Place the Tyrant's Card, Chip, and Die to the left of the Battle Mat.

Place the Day Counter Card and Chip (set to 1) directly below your Tyrant Card.

Encounters

Find any Tyrant Encounters (blue) associated with that Tyrant (1-3 cards and labeled with the Tyrant name at the bottom of the card) and set those aside. Place other Tyrant Cards in the game box.

Shuffle the General Encounter Deck (green), or Solo Encounter Deck (green and labeled "Solo" at the bottom) if playing with only one Gearloc, and draw Encounter Cards equal to the  shown on your Tyrant Card minus 3 cards. Shuffle these together with the Tyrant Encounter Card(s) you set aside, and place them all to the left (story side up) of the Battle Mat as shown. Place other Encounter Cards in the game box. In rare instances where you run out of Encounters, you may replenish your Encounter Deck from the game box.

Finally, find Special Encounters 001-003 and place them, in order, on top of your newly created Encounter Deck. Place other Special Encounters in the game box (keep these accessible, as you may need them later on).

Loot & Trove Loot

Shuffle all Loot and Trove Loot cards and place both decks (chest side up) to the right of the Battle Mat. Take the 4 Lockpicking Dice and place them nearby.

Baddies

Using the Baddie Type icons () shown on your Tyrant Card, find all Baddies of these types. Flip them face down, shuffle, and create 1Pt, 5Pt, and 20Pt Baddie "Active Stacks." Place these stacks above the Battle Mat. Place other Baddie Chips in your game box (on occasion, you may need to access these Baddies for a specific Encounter). If you ever run out of Baddies in an Active Stack, reshuffle defeated Baddies.

Place a few stacks of 8-10 Health Chips to the right of your Baddie Active Stacks as shown.

Gearlocs

Each player chooses a Gearloc and places their selected Gearloc Mat, Gearloc Chip (with [#] of Starting Health Chips underneath it), Initiative Die, and Stat Dice as shown. Adjust mat placement to your liking based on party size.

Find your Gearloc's 16 Skill Dice and place them in a Storage Tray near your Gearloc Mat (the tray covers work great for storing Atk and Def Dice near each Gearloc as well).

Using your Gearloc Reference Sheet (front right column), look for any Skills with a circle (C) next to their name. Your Gearloc starts the game with these Skills (find the Skill names on your Gearloc Mat and then place the Skill Dice with corresponding numbers into those slots on your mat). These dice are usually Counters (meaning the side facing up on your mat is important). Start these dice with their "0" side showing, if possible.

Other Components

Gather some Atk Dice (6-10), Def Dice (10-12), and Effect Dice (2-4 of each type), and place them below the Battle Mat. Set the black D6 in this area as well.

Place the 4 Lane Marker Chips above the Battle Mat as shown. Do the same for the 4 Baddie Initiative Dice.

Lastly, place the Round Counter Die at the top of the Initiative Meter on the Battle Mat, set to R1.

You are ready for your adventure!

GAMEPLAY OVERVIEW

While the main objective of TMB is to take down the selected Tyrant, you must first earn enough Progress Points to do so. It's also imperative that you strengthen your Gearlocs, honing their Stats and Skills in preparation for that final battle.

Both progress and training can be achieved through daily Encounters. These situations will provide your party with choices that can result in peaceful outcomes or battles.

Let's start by discussing how and when all of this happens.

GAME PHASES

Each day of your adventure will take you through 4 game phases. Once all 4 are completed, a new day begins, and you will repeat these phases.

1. New Day

- Rotate Day Counter 1 day (skip this for Day 1).

2. Encounter Phase

- Draw an Encounter and read it to the party.
- Pick a choice and attempt to successfully complete it.
- If successful, go to the Reward Phase.
- If unsuccessful, skip the Reward Phase and go directly to the Recovery Phase.

3. Reward Phase

- Gain all rewards specific to your Choice. Also gain any general Encounter rewards.
- If rewards include Loot or Trove Loot, draw them now.
- If rewards include Training Point(s), use them now.
- If rewards include Progress Point(s), place card (with Progress Point showing) under Tyrant.

4. Recovery Phase

- Trade Loot and Trove Loot within your Party. Any Loot! Any amount! To anyone...or leave it behind (discard whatever you like)!

- Make a Lockpicking Attempt. This can be on your Trove Loot or someone else's.
- Individual Options (each Gearloc may choose 1):
 - **Rest and Recover:** Heal to full HP.
 - **Search for Better Loot:** Discard 1 Loot or Trove Loot. Roll 6 Atk Dice. For each ⚡ you roll, reveal a Loot card - you may keep 1.
 - **Scout the Area:** Roll a D6. On 1-3: Reveal a 1Pt Baddie; 4-5: Reveal up to a 5Pt Baddie; 6: Reveal up to a 20Pt Baddie. Once revealed, you may leave that Baddie face up on top of the stack or cycle that Baddie to the bottom. *There is no limit to the # of Baddies you can reveal per stack.

This completes your day! Start over at: New Day.

*These TMB game phases are what progress you through the game. They will make even more sense once you learn about Encounters, your Gearlocs, and how battles work.

ENCOUNTERS

Encounters are daily situations your party must overcome as they make their way toward the Tyrant. Each day, your party will start by drawing an Encounter Card and reading it aloud. The front of the card presents a situation your party "encounters." The back lists your choices and the effects those choices will have on the Encounter (you may read the entire card and discuss before deciding).

Your party must choose one of the options offered. These choices will result in a peaceful outcome (no battle) or a battle. Either way, you must successfully complete the Encounter to earn its rewards (usually Progress Pts, Loot, and/or Training Points).

Specific choices may have rewards listed after that choice. General rewards given for successful completion of either choice are listed at the bottom of the card (left/right corners). *Refer to the key below for Encounter Icon explanations.

Encounter Icons

- This Choice will result in a battle. *Must succeed to gain rewards & Progress.
- This Choice does not result in a battle. *May still have requirements for success.
- Gain # Progress Points for completing this Encounter.
- Each Gearloc draws 1 Loot.
- Draw # Loot. *Party decides how to distribute.
- Each Gearloc gains 1 Training Point.
- Each Gearloc draws 1 Trove Loot.
- Draw # Trove Loot. *Party decides how to distribute.

Encounter Text Colors

Choice Text, Choice Result Text, Flavor Text, Special Instructions

A peaceful Encounter choice is automatically successful unless otherwise noted (see card example to the right). A battle Encounter choice is successful if at least one Gearloc remains on the Battle Mat after all Baddies are defeated. Once an Encounter is successful, the party moves into the Reward Phase.

If an Encounter is unsuccessful (Peaceful or Battle), your party does not gain any rewards and must immediately move into the Recovery Phase.

Encounter Types

There are 3 types of Encounters in TMB. Special Encounters are used only when instructed in set-up or by another Encounter. Tyrant Encounters are added to the Encounter Deck based on which Tyrant you are facing (explained on page 7). Regular Encounters come in 2 sets: General and Solo Encounters (indicated on the front at the bottom of each card). Use Solo when adventuring with 1 Gearloc only. Use General for 2 or more Gearlocs.

REWARDS

Upon successfully completing an Encounter, check the card in 3 places for any rewards your party has earned. First, check to the right of your Choice Text for any rewards specific to your Choice. Next, look in the bottom left (Progress Points) and right (Training Points, Loot, and Trove Loot) corners for any general Encounter rewards. Draw, assign, and/or record these rewards now. Then, move to your Recovery Phase.

RECOVERY

During your Recovery Phase, you may trade Loot and Trove Loot, make a Lockpicking Attempt (Lockpicking described on page 21), and choose one individual option (described on the previous page). If you opt to "Search for Better Loot" and no ⚡ is rolled, the discard still happens.

Once your Recovery Phase is complete, your day ends, and you start over at the "New Day" Phase.

IMPORTANT:

Before we get into these Phases further, it's imperative that you have a solid understanding of your Gearloc and how your Gearloc Mat interacts with everything else. Please select a Gearloc Mat and place it in front of you for easy reference during this next section. Also, find your corresponding Gearloc Reference Sheet and keep it close, as we will be referencing it as well.

GEARLOC MAT

Your Gearloc Mat represents everything that makes your Gearloc unique and effective in battle and can be built differently every adventure!

1. Stat Area

- Each Gearloc has 4 Stats: Health, Dexterity, Attack, and Defense.
- Each Stat consists of a Starting Stat (printed number on the mat) which can be increased by placing a Stat Die in the corresponding Stat Dice slot during the game. The Starting Stat plus the value of the Stat Die equals the current (Max) Stat of your Gearloc.
- You can upgrade these stats using Training Points (☺) from completing Encounters.
- A Training Point gives you 1 Training Attempt for any Stat (or Skill).
- If a Training Attempt is successful, place (or increase by 1) a Stat Die in the slot next to the Starting Stat to reflect the new modified number (Stat Dice cannot go higher than 6).
- Stat Dice from Training remain throughout the adventure.

Health (HP)

- Your HP is the number (#) of Health Chips your Gearloc currently has stacked under their Gearloc Chip.
- HP cannot exceed its (Max) Stat (excess healing or regen is lost). *Buff HP is separate from your HP and is therefore handled differently. Your individual Gearloc Reference Sheet will give specifics if they have a Buff HP Skill.
- An HP Training Attempt will always succeed. After Training in HP, add 1 HP to your Gearloc (in addition to increasing the HP Stat Die).
- Losing your last HP means you are Knocked Out (KO'd). Remove your Gearloc, its Initiative Die, and all slotted Active, Locked, and Backup Plan dice from the Battle Mat (use Recovery Phase to replenish to full HP).

Dexterity (Dex)

- Your Dex is the total (#) of dice you may roll each turn (any combination of Atk, Def & Skill Dice).
- A Dex Training Attempt will always succeed.
- Dex may also be spent to move your Gearloc on the Battle Mat (costs 1 Dex per position).

Attack (Atk)

- Your Atk Stat is the (#) of Atk Dice (🔪) you have available to roll **each turn** (not Exhausted when used).
- Each Atk Die costs 1 Dex to roll in battle.
- An Atk Training Attempt requires you to roll your current Atk (Starting Stat + Stat Die). If no ☒ are rolled, you are successful. If unsuccessful, there is no Atk Stat increase, and you must spend this Point elsewhere.
- Atk Dice must have a target before they are rolled (one target only).

- Each rolled 🔪 is (#) damage (Dmg) that may be applied to target (can be combined with other rolled Dmg).
- If any Dmg is done to your target through use of Atk Dice, it is considered a "Hit".
- Each rolled ☒ may be used in your Backup Plan (does not reduce (#) of Atk Dice available to you in future turns).

Defense (Def)

- Your Def Stat is the (#) of Def Dice (🛡️) you have available to roll **each turn** (not Exhausted when used).
- Each Def Die costs 1 Dex to roll in battle.
- A Def Training Attempt requires you to roll your current Def (Starting Stat + Stat Die). Any ☒ rolled are rolled once more. If no ☒ are rolled after the second roll (or first), you are successful. If unsuccessful, there is no Def Stat increase, and you must spend this Training Point elsewhere.
- The total Def Dice currently in Active slots will reduce available Def Dice for rolling this turn (e.g. Boomer has a Def stat of 2. She rolls both Def Dice on her turn and gets a 1 and a 2 result. She chooses to place both dice in her Active slots. Later in the round, a Baddie attacks her for 1 Dmg, so she chooses to remove the 1 Def from her Active slot. It's now her turn again, but because she still has a Def Die in her Active slot, she can only roll 1 Def Die this turn).
- Each rolled 🛡️ may be placed in an Active slot (must use actual rolls - cannot combine results from 2 dice into 1).
- The total (#) of 🛡️ in your Active slots is the (#) Atk Dmg you may prevent. Decrease 🛡️ by this amount (in the example above, Boomer had the choice between reducing a 2 Def to 1 or simply removing the 1). Def Dice must be used for all incoming Dmg (except True Dmg) first before removing HP.
- Each rolled ☒ may be used in your Backup Plan (does not reduce (#) of Def Dice available to you in future turns).

Innate & Innate+1

- Each Gearloc starts with a unique talent (Innate) and can use it throughout their adventure. Use your Gearloc Reference Sheet to learn more about what it can do.
- Your Gearloc's Innate can be upgraded by using 6 ☒ on your Backup Plan. Once upgraded, this also lasts the entire adventure, and its effects are explained on your Gearloc Reference Sheet.
- Play with the non-star side of your Gearloc chip face up until you upgrade to Innate+1, then flip it!

Attack Form (Ranged / Melee / Melee-Ranged)

- This determines how your Gearloc can attack. Melee (& Melee-Ranged) Gearlocs can only target adjacent units when attacking (rolling Atk Dice). Ranged Gearlocs can target any unit.
- Your form also determines your Gearloc's Battle Mat starting position options in battle (discussed on page 17).

Unlike Skill Dice, Def and Atk Dice are never Exhausted and are available to you every turn...unless, of course, you meet a golem...or maybe a bog wym. In that case, I've got this, just stay behind me! My point is, Atk and Def stats are important! Roll these dice and use them often!

GEARLOC MAT CONT.

2. Exhausted Dice Area

- When Skill Dice are used, they must be Exhausted (unless otherwise noted).
- Exhausted Dice are stored to the left of the Gearloc Mat for the remainder of the current battle and are no longer available to you. All Exhausted dice are unexhausted after battle.
- Baddie Skills may force you to Exhaust Atk or Def Dice. Each die Exhausted in this way reduces your Atk or Def Stat by 1 for the battle.

3. Prep Area

The picture of your Gearloc also serves as a staging area for certain components throughout the game.

- This is where your Gearloc Chip stack with its current HP sits when not in battle.
- If your Gearloc receives Buff HP, it is placed here.
- Some Gearlocs even use this area for staging certain Skills before they are used in battle.

4. Skills Area

Skill Dice

- Begin your adventure with all Skill Dice in your Storage Tray (out of play), except for any Skills your Gearloc starts with. These have circled bullets on your Gearloc Reference Sheet (☉).
- Skills are learned through Training Points. When you train/unlock a Skill, locate the numbered die in your Storage Tray that matches the Skill you're training and place it on your mat in its correct slot.
- The side showing on Skill Dice in your Skills Area doesn't matter (Counters are often the exception).
- A Skill Training Attempt will always succeed.
- Skills are usable only once per battle (unless otherwise noted). Exhaust each Skill Die after use.
- Once trained/unlocked, Skill Dice are usable throughout the adventure.
- Each Skill Die side has an icon that can be matched to your Gearloc's Reference Sheet to find out how this icon functions. It also shows where this die may be placed once its rolled (i.e. Active [A], Locked [L]).

Professions

- A profession is a set of Skills unique to your Gearloc. Professions are listed in the top right corner of the Stat Area, and their corresponding Skills are linked by colored lines in the Skills Area.
- Starred (★) Skills (visible next to certain slots in your Skills Area) are always available for training.
- Some Skills will have arrows pointing to them and do not have a ★. These Skills must be learned in order, starting with a ★ Skill and following the arrows (if 2 arrows point to a Skill, only 1 is needed to unlock it).
- You do not need to unlock all the Skills in a profession before starting another profession.

Consumables

- Consumable Dice cannot be gained using Training Points and are instead acquired through Loot or certain Backup Plans. *Some Gearlocs even start with certain Consumable Counter Dice on their mats.
- When you acquire a Consumable Die, take it from your Storage Tray and place it on your mat.
- Once a Consumable is used, it is removed from your mat (place back in your Storage Tray). *A few Consumables are the exception to this rule and remain on your mat as a counter throughout your adventure.

5. Backup Plan (BP)

Backup Plan Skills

- Only 1 Backup Plan Skill may be used per turn.
- The cost of using a BP Skill varies from 1-6 ⌘ as shown on Gearloc Mat & Reference Sheet.
- Remove [#] ⌘ to use a BP Skill that costs [#]. ⌘ from Atk & Def Dice are simply removed, but Skill Dice used in this way must be Exhausted.

Managing Bones

- Up to 5 total ⌘ may be stored within the BP from turn to turn.
- Line up ⌘ from left to right in the order they are earned.
- Use ⌘ from left to right. Shift unused ⌘ all the way left.
- ⌘ may remain in your BP until used and must be cleared at the end of battle or if KO'd.

Multi-Bones Dice

- These take up multiple slots on the BP (skip slots to show this).
- If the BP Skill uses up only part of a multi-Bones Die, the entire die is used and any unspent ⌘ are lost.

Upgrading to Innate+1

- It takes the use of 6 ⌘ to upgrade to a Gearloc's Innate+1.
- Flip over Gearloc Chip (to stars side) for the rest of the adventure to indicate this upgrade!

How Skill Dice function can vary greatly. Some are immediately resolved, while others are placed into your Active Slot, waiting to be triggered. A few Skills even go into your Locked Slots, where they may remain for the entire adventure, or until you choose to use them! To learn more about how each Gearloc's Skills work, read about them on the Gearloc Reference Sheets.

Bones are misses, sort of. You will find that the vast majority of the dice that you roll may have one or more sides with the Bones icon. Oftentimes, these are an undesired result of the dice you rolled. However, they play a pivotal role in your decision-making process. You will always have the option of putting Bones into your Backup Plan.

6. Active Slots

- Place rolled Def Dice and Active (A) Skill Dice effects here. Ally Active (AA) Skill Dice effects are also placed in this area (by other Gearlocs). Specific Active and Ally Active Skill Dice effects are explained on the Gearloc Reference Sheets.
- Active Dice remain here until used and must be cleared at the end of battle or if Gearloc is KO'd.
- Skill Dice in these slots must be Exhausted when used (unless otherwise stated).

7. Locked Slots

- Place rolled Locked (L) Skill Dice effects here.
- Locked Dice remain here from battle to battle until used. These dice must be cleared if Gearloc is KO'd.
- Skill Dice in these slots must be Exhausted when used (unless otherwise stated).

NOTE: To free up space, a player may remove (Exhaust if Skill Die) dice from Active or Locked slots at any time during their turn.

8. Loot Area

- When a Gearloc gains Loot or Trove Loot, they can store it to the right of their Gearloc Mat.
- Each Gearloc can hold up to 4 Loot/Trove Loot (when out of spots, choose 4 spots worth, discard remaining cards).
- Locked Trove Loot always only takes up 1 spot.
- Loot/Trove Loot fully explained on Page 21.

BADDIES

Baddies represent the opposition you will face during your adventure. Each Baddie comes with its own chip and stats.

1. HP

This is the number of Health Chips placed beneath a Baddie when it enters the Battle Mat.

2. Initiative

This determines the Baddies starting spot on the Ini Meter. A Baddie Initiative Die is used to indicate this.

3. Attack Form

Melee Baddies (X) can only attack adjacent (not diagonal) opposing units. If none exist, they cannot attack this turn. Ranged Baddies (X) can attack any opposing unit, regardless of mat position.

4. Creature Type

5. Defense

This is the # of Def Dice this Baddie rolls on its turn (minus any already active Def Dice). Rolled is applied to top of Baddie chip (making the die active). A Baddie does not need a target in range to roll its Def Dice.

6. Attack

This represents the number of Atk Dice this Baddie rolls against its target on its turn. Total rolled is [#] Dmg done to target. If Baddie has multiple targets, these dice are rolled separately for each.

7. Skills

These Skills (in black) are always in effect. Refer to the Gearloc Adventuring Reference Guide for a list of Baddie Skills and how they work.

8. Baddie Backup Plan (BP) Skills

These Skills (in blue with X icon) trigger if a Baddie rolls at least the # of X shown on the Baddie chip from all its Atk and Def Dice rolls combined this turn. Rolled X do not carry over to the next turn.

If a triggered Skill requires a target and the Baddie has multiple targets, party may choose.

These Skills can only be triggered once per turn and are listed on the Gearloc Adventuring Reference Guide.

9. Target(s)

Melee Baddies always pursue the "closest" (route with fewest positions) opposing unit. If there is a tie, it will then use its to determine which unit it pursues and attacks. A Baddie's target (O) is either (A) the weakest (lowest HP) or (B) the strongest (highest HP) opposing unit. Party chooses on ties of strength.

Ranged Baddies don't move, so they just attack their O. Some Baddies will attack multiple targets (shown by [#] of figures within the O icon) but will not attack the same target more than once per turn. Roll Atk Dice for each target separately.

10. Diagonal Movement

Only Baddies/Tyrants with can move diagonally.

11. Extra Baddies

A Baddie with or adds this many 5Pt Baddies to the top of the Battle Queue when it enters the Battle Mat.

Movement

Further details on Baddie Movement and Targeting are discussed on page 20 in the first column.

Baddie Points (Pts)

There are 4 types of Baddies: Tyrants, 1Pt, 5Pt, and 20Pt Baddies. They are identified by their image or [#] Pts on the back of the Baddie chip.

IMPORTANT:

Now that you have a grasp on the intricacies of your Gearloc, we can introduce you to the opposition! Baddies (and eventually the Tyrant) are what you will be battling all the way to the end of your adventure.

For this next section, find a 1Pt, 5Pt, and 20Pt Baddie, and grab a Tyrant Chip while you are at it. Keep these close for reference and comparison. Also, find your Gearloc Adventuring Reference Guide and flip it to the back where the Baddie Skills are listed.

You are all set! Let's dig in!

TYRANTS

Reaching and defeating the Tyrant is your main objective in Too Many Bones.

Tyrant Card

A Tyrant Card front gives information about that Tyrant and shows the Creature Types you are to use for this adventure. It also lists the Progress Points (#) needed in order to challenge the Tyrant. While you are not required to challenge the Tyrant the day after earning the required #, you must defeat the Tyrant before its # is exceeded in order to win.

The back of the Tyrant Card instructs you on how to set up the Battle Mat for the Tyrant battle and explains each Skill the Tyrant has, including its Tyrant Die. You only need to defeat the Tyrant Baddie to win this battle.

A failed Tyrant battle is handled the same as an unsuccessful Encounter battle and can be tried again if you have enough days for another try.

Tyrant Chip

Each Tyrant has a chip that is used as a Baddie chip in the final battle.

Tyrant Die

Along with its Atk and Def Dice, each Tyrant has a unique Tyrant Die that is rolled each time the Tyrant takes its turn. This die is only rolled once per Tyrant turn.

Tyrant Encounters

Each Tyrant has Tyrant Encounter Cards specific to them. Tyrant Encounter Cards for the Tyrant you are pursuing are always shuffled into your Encounter Deck before your adventure begins.

IMPORTANT:

Congratulations! You are now ready for the Battle sections! With your new understanding of the Baddies and their stats, we can now introduce you to where these battles will be taking place!

For these next sections, find your Battle Mat and stack a few Baddies next to it. Then, add the Round Counter Die to the meter area. Also have your Gearloc (chip and die) nearby, as these are used on the Battle Mat as well.

While this section is being discussed, feel free to use your components to mimic what is being described.

BATTLE MAT

The Battle Mat...a place of risky moves and ruthless combat. This is where all the action happens and a place you will want to get very familiar with!

1. Initiative Meter (Ini Meter)

In battle, a single turn from each Baddie and Gearloc completes 1 full round. The Ini Meter tracks the current round and whose turn it is. It also gives you a visual forecast of who will be attacking next and in what order. Initiative is built downward on the meter from highest (going first) to lowest (going last).

- The Round Counter Die goes on the top of the Ini Meter, starting with R1.
- Increase this die to R2, R3, etc. at the start of each new battle round.
- After R5, the (Fatigue) rounds occur until the battle is completed. At the start of each (Fatigue) round, all units on the Battle Mat lose 1 HP (this is not counted as any specific type of Dmg and cannot be blocked or defended against in any way).

Initiative Dice Placement (setting up for R1 of battle)

- Baddies have their Initiative (#) indicated on their Baddie Chip. A Baddie Initiative Die is used to represent this (#) on the Ini Meter (e.g. if a Baddie with 3 Initiative is in Lane 1, use the blue Lane 1 Initiative Die, and set it to 3 on the Ini Meter). Place the Initiative Die of each Baddie in the Ini Meter (highest on top in descending order). Any tie between Baddie Initiative is then decided by their Lane priority (a Lane 1 Baddie would go above/before a Lane 2 Baddie).
- Each player rolls their unique Gearloc Ini Die to determine their spot on the Ini Meter. For any Initiative tie that involves a Gearloc, the party chooses who goes first.

Initiative Dice During Battle (R2 and beyond)

- After initial Initiative placement is set for Gearlocs and Baddies, the (#) on these dice no longer matters. During battle, certain Skills can modify the Ini Meter, but always in relation to other units current Ini Meter "spots" (e.g. Tantrum can drop a Baddie 3 spots on the Ini Meter).
- Units that enter the battle after R1 will always enter at the top or bottom spot of the Ini Meter. All Gearlocs, Tyrants, and 20Pt Baddies enter the Battle Mat at the top spot of the Ini Meter (again, Ini (#) is disregarded). All 1Pt & 5Pt Baddies enter the Battle Mat at the bottom spot of the Ini Meter. Follow R1 rules for any ties.
- Units with their Initiative spots modified during the round will take their new spots only after the round is complete (feel free to shift their Initiative Dice to the side as a reminder).

2. Baddie Starting Positions

Use the colored positions for Baddies. Melee Baddies start on X positions; Ranged Baddies start on X positions. The first Baddie to enter the Battle Mat goes in Lane 1 (1). The second Baddie, Lane 2, etc. As Baddies move, they may change Lanes; therefore, place a Lane Marker Chip (matching its starting Lane color) under each Baddie when it enters battle.

3. Gearloc Starting Positions

Use the grey positions for Gearlocs. Melee Gearlocs start on X positions; Ranged Gearlocs start on X positions; Melee-Ranged Gearlocs start on either. Gearlocs may start on any Lane and may even double up on a single Lane.

4. Adjacent Movement

When moving, Gearlocs and Baddies can only move to adjacent positions (not diagonal) and never "through" other units. Baddies with (G) can move diagonally.

BATTLE SET-UP

Most of the Encounters in TMB will result in a battle (♣) of some sort. Sometimes, the Baddies you face are specifically defined on your Encounter Card, but more often, the Encounter will include **"BQ: Baddie Pts"** as part of the battle set-up (use this by default if a battle choice does not mention a BQ).

Battle Queue (BQ)

Every battle must start with the creation of a Battle Queue that contains the Baddies you will be facing for the fight. To build this queue, you must refer to your Encounter Card and then assemble a stack of Baddie chips using your Baddie Active Stacks. Unless you have scouted specific Baddies (which turns them face up), the queue should always be assembled face down so the Baddies are unknown before the battle begins. Also, when creating this queue, greater Pt Baddies should always be placed higher on the stack than lesser Pt Baddies. "If the BQ calls for a specific Baddie or type, search your Baddie Active Stacks first, then out of play Baddies.

Baddie Points

"BQ: Baddie Pts" is a short way of saying you need to create your initial Battle Queue by calculating your Baddie Points (Baddie Pts).

Step 1: Current Day x Number of Gearlocs in Party (i.e. Day 4 x 3 Gearlocs would be 12 Baddie Pts)

Step 2: Draw Baddies to equal Baddie Pts using highest Pt Baddies when possible (i.e. 12 Baddie Pts means 2 5Pt Baddies and 2 1Pt Baddies).

Step 3: Stack 'Em (i.e. 2 1Pt and 2 5Pt Baddies would be stacked top down: 5, 5, 1, 1).

Easy! Don't forget to factor in any other Encounter requirements or Skill modifications that could affect this number. Sometimes this can affect your Baddie Pts total BEFORE you draw your Baddies (i.e. going from 18Pts to 20Pts has a HUGE effect on which Baddies will be fought). Other times, Baddies are added to your BQ AFTER it's been created. All of this is determined and explained on your Encounter card, so read it carefully!

Battle Set-up Sequence

Now that you understand BQ basics, let's go through the battle set-up from start to finish.

1. Trigger "before battle" effects and Skills such as Tantrum's 'Rage' Skill.
2. Use Encounter Card instructions to build your BQ.
3. Place top Baddie from BQ in its appropriate Lane and Battle Mat position (also its HP, Lane Marker, and Initiative Die). Continue placing Baddies until there are 4 on the mat or the BQ is empty. *See pages 16-17 for more on Baddie placement and Initiative.
4. Roll Gearloc Initiative Dice. Add them to Ini Meter.
5. Place Gearlocs from their Prep Area onto Battle Mat in appropriate positions (with existing HP).
6. Make sure your Round Counter Die is set at R1.
7. Trigger "start of battle" effects and Skills such as Picket's "Shield Wall" Innate.

You are ready to battle! Each unit will now take its turn, starting with the top initiative spot!

IN BATTLE

Baddie BQ - In Battle

During battle, you may still have Baddies in your BQ (due to having more than 4 Baddies to start or from Skills like "Signal," which calls more Baddies to the BQ). These Baddies will not join the battle until there are fewer than 4 Baddies on the Battle Mat. If that is the case, once the round ends, the top Baddie(s) from the BQ will join and assume the first available Lane Marker(s) and Initiative Dice (see page 17, "Initiative Dice During Battle").

Place the Baddie in the Lane that matches its Lane Marker and on the position matching its Attack Form. If that position is occupied, the Baddie will instead take the first available Baddie position (starting with Lane 1-4) that matches its Attack Form. Then, it will try lanes of the other Attack Form.

IN BATTLE: GEARLOC TURN

Gearloc Movement and Targeting

Melee Gearlocs may use [#] Dex to move [#] adjacent positions and target 1 adjacent Baddie each turn. Ranged Gearlocs may use [#] Dex to move [#] adjacent positions and may target 1 Baddie anywhere on the Battle Mat each turn. No "line of sight" is needed.

Melee/Ranged Gearlocs may use [#] Dex to move [#] adjacent positions and target 1 adjacent Baddie each turn. Use the Gearloc Reference Sheets to learn how these hybrid Gearlocs may target non-adjacent Baddies on the Battle Mat. *Some Gearloc Skills may allow for selecting non-target Baddies, Battle Mat positions, or even multiple Baddies!

Gearloc's Turn Sequence

1. Loot: Unless otherwise specified, use Loot anytime during your turn (even before triggering Effects).
2. Effects Trigger: Be sure to check for Effect Dice on top of your Gearloc chip.
3. Move Gearloc: You may use # Dex to move # adjacent (not diagonal) positions.
4. Determine Target if Attacking: If your roll contains Atk Dice or Skill Dice requiring a target, select your target before you roll.
5. Select and Roll Your Dice: Your remaining Dex represents how many dice you may roll. The dice you may choose from are determined by your current Atk Stat, Def Stat, and available Skill dice (e.g. If I have a current Atk Stat of 2, Def Stat of 1, and 3 available/rollable Skills, I have 6 dice I can choose from to roll. If my Dex is 3 and I did not move this turn, I can only choose 3 of those 6 dice options).
6. Resolve the Roll: *See next section.
7. Baddies React: Sometimes Baddies have Skills that kick in after they are attacked.

Resolving the Roll

Note: As a Gearloc, you do not need to use the result of any dice you roll unless the Profession or rolled icon rules state otherwise. For instance, if you roll Atk Dice successfully and then realize you are attacking a Dire Wolf with Lashback and don't want to hit it yet, you do not need to use your result. Or, if you roll a Med Pack (Patches) Skill Die and the result is a 1HP heal instead of 3HP, you can choose not to heal and place that Skill Die back in its slot on your Gearloc Mat (Dex is still counted for the roll).

After your dice are rolled, feel free to do any of the following, **in no particular order**:

- Resolve Target Dmg & Effects: Total up and apply ⚔ Dmg and any other Dmg results or effects from your Skills to your target.
- Resolve Non-Target Dmg & Effects: Some Skills may apply to non-target Baddies. Others may be Instant Skills that do not apply to Baddies at all. Go ahead and use these Skills as desired.
- Allocate Active, Locked & Backup Plan Dice: Place any rolled ♣ you want to use into open Active slots. You may also place any applicable Skills into your Active (or a Gearloc's Ally Active) & Locked slots. Also, you may place ⚔ in Backup Plan slots as desired.
- Use your Backup Plan: You may use your Backup Plan only once per turn. Remove [#] ⚔ to use BP Skill that costs [#].

IN BATTLE: BADDIE TURN

Baddie Skills

All Baddie Skills are unique and trigger at very specific times throughout the battle depending on the Skill. Be sure to review all Skills shown on Baddies currently on the Battle Mat so you know when they apply. For Baddie Skills that require a target, that target must be within attack range in order to apply that Skill (i.e. Poison, Corrosive, etc).

Baddie Movement and Targeting

⊗ Baddies do not move and can target any opposing unit on the Battle Mat. ⊗ Baddies may move up to 2 adjacent positions per turn. They will always target and move toward the closest (route with fewest positions) opposing unit. If there is a tie for "closest", use its ⚙ (discussed on page 15) to determine which unit it pursues. A ⊗ Baddie will always take the shortest possible route toward a position adjacent to its target. If no positions are available adjacent to any target(s), the Baddie will not move. Or, if already adjacent to an opposing unit, it will not move.

▶ Baddie's Turn Sequence

1. Effects Trigger: Resolve applicable Effect Dice sitting on the Baddie chip (i.e. Bleed, Poison, Disable, etc).
2. Determine Baddie's Target(s).
3. Move: Move Baddie if ⊗ and not adjacent to an opposing unit (up to 2 adjacent positions toward closest ⊙).
4. Skills: Any Skill for this Baddie that does not list a specific time it happens, should be resolved now, if possible.
5. Roll Dice: Roll all of Baddie's inactive Def Dice and also roll its Atk Dice (only if target is within attack range). *If Baddie can target multiple units (⊙) and they are in attack range, roll its Atk Dice for each.
6. Resolve the Roll: Place rolled ♣ on Baddie, apply total rolled ♣ to target, and resolve any ⊗ triggered Skills.
7. Gearlocs React: Don't forget to trigger Gearloc Skills if they apply!

KO'S AND WIPES

▶ Getting Knocked Out

Getting "KO'd" during battle is going to happen to you. Hopefully less if playing solo, but depending on your roll, it could happen more than you expect! Do not be discouraged by this! KO's are an inevitable part of being a fearless Gearloc!

If you are KO'd (lose your last Health chip), your Gearloc chip and Initiative Die come off the Battle Mat and are placed in your Gearloc Prep Area. All slotted Active, Locked, and Backup Plan dice are cleared (Skills are Exhausted) from your mat. Loot stays with you but is not usable while you are KO'd. *Certain Gearlocs have Skills that can Revive KO'd party members. These Skills are specifically defined on that Gearloc's Reference Sheet.

Full Party "Wipe"

If your entire party runs into bad luck and everyone gets KO'd, the battle ends, but the adventure continues! Skip the Reward Phase and move directly to the Recovery Phase for that day. Unless you have loot that grants HP, each Gearloc will likely have to choose "Rest and Recover" as their individual choice option during this phase.

BATTLE RESULTS

Successful Battle

Clear all dice from each Gearloc's Active slots and Backup Plan. Place all Exhausted Skill dice back into their Skill slots. Place all Gearlocs with their remaining HP, back on their own Gearloc Prep Area and move to the Reward Phase. *Game Phases are discussed in detail on pages 8 and 9.

Unsuccessful Battle

Clear all dice from each Gearloc's Active slots, Locked slots, and Backup Plan. Place all Exhausted Skill dice back into their Skill slots. Place KO'd Gearlocs on their Gearloc Prep Area (if not there already).

Place any undefeated Baddies face down on the bottom of their appropriate Active Stack and move directly into the Recovery Phase.

IMPORTANT:

Now that you understand the basics of battle in TMB, we can't forget to talk about the best part... the spoils! This section is short but is packed with lots of final details you won't want to miss!

Go ahead and grab a Loot Card, a Trove Loot Card, and your 4 Lockpicking Dice. Also keep your Gearloc Adventureing Reference Guide handy!

Once we are done here, its on to an actual playthrough, you are almost there!

LOOT/ TROVE LOOT

In order to have a chance at taking down a Tyrant, your party will need to find some Loot and, if lucky, some Trove Loot along the way. Here are a few details about both:

- You are limited to 4 Loot & Trove Loot per Gearloc at any time (when out of spots, choose 4 spots worth, discard remaining cards).
- Turn a Loot card with multiple uses to show it has been used (start with highest #).
- After fully using Loot card, discard it.
- During battle, if not specified otherwise, Loot & Trove Loot must be used on your turn.
- Trove Loot should remain "chest" side up until fully opened through successful Lockpicking Attempts (always takes up only 1 spot while locked).
- **Heavy:** Counts as 3 Loot.
- **Permanent:** Do not discard when used.
- **Backup Plan Extensions** grant additional BP Skills that you may use ⊗ for. Using this counts as using your Backup Plan for this turn.

▶ Lockpicking

The need for Lockpicking can come from a random Encounter or any Trove Loot you manage to get your hands on. There are 4 Lockpicking Dice used in this process consisting of 1 Intuition Die and 3 Action Dice. You can learn more about how these work on the Gearloc Adventuring Reference Guide.

Each Gearloc will have an opportunity to make one Lockpicking Attempt per day on any discovered Trove Loot during the Recovery Phase. If you manage to solve only the 1st or 2nd lock during an attempt, those locks remain solved, giving you a head start on your next attempt. Also, your Lockpicking Attempt can be used on someone else's Trove Loot instead of your own if you see that as more beneficial.

MISC.

D6 Die (black with pips)

Used for any situation that requires you to "Roll a D6."

Damage Types

Damage (Dmg)

Can be blocked by Def Dice or Skill: Thick Skin.

True Damage (True Dmg)

Ignores Def Dice and Skill: Thick Skin.

Dangerous Darts (DD)

You will most likely be playing DD soon after meeting the Mohlnor, and could be initiated by any one of a number of Encounters. It is advised that your party become familiar with the game and how to play it. You will find the specifics covered on the Gearloc Adventuring Reference Guide.

Day Counter (chip and card)

At the start of each day, rotate this chip by 1. This happens regardless of whether your previous Encounter was successful or not. You must challenge and defeat the Tyrant before the Day Counter exceeds the Tyrant's .

Effect Dice

These dice are used to help remember when a specific Effect is in use or applied to a unit on the Battle Mat. Place this die on the Baddie or Gearloc Chip to show the Effect is Active. These are the only dice that get placed on Gearloc Chips.

Progress Points (Pts)

Progress Points  represent the party's advancement toward the Tyrant. Stack all successfully completed Encounters, with their  showing, in a neat row to easily reference how many points your party currently has. Once you earn enough Progress Pts to equal or exceed the  shown on your Tyrant, you may choose to face the Tyrant instead of drawing an Encounter during your next Encounter Phase.

Training Points

A Party Training Point  is earned through the successful completion of Encounters. When a  is earned, each party member gains a Training Point that can be used toward a Training Attempt of one of their Skills or Stats.

Training HP, Dex, or a Skill will always succeed. However, training in Attack or Defense requires a successful attempt in order to increase this stat. A failed attempt means you will be forced to train in something else with that Training Point. The training process is covered in the Gearloc Mat section (page 10-11) and on the Gearloc Adventuring Reference Guide.

Special Encounter: Mohlnor Traders

Each Gearloc must compete in their own Dangerous Darts Challenge.

Win: Gearloc may draw 2 Loot.

Lose: Gearloc must discard 1 Loot (if they have one).

The origins of Dangerous Darts is not fully known. However, in recent decades, the Mohlnor have latched onto the game and adopted it as a go-to pastime for just about anything. Entertainment? Bartering? Disputes? A game of Dangerous Darts (always rigged in their favor) is the answer!

While most Gearlocs detest the game, sometimes even they have been caught playing to decide party leader status and the like. In those rare cases, younger Gearlocs always go first and dice choosing is done in secret.

EASING INTO TOO MANY BONES

Invading The Ebon is no easy task. In fact, some Gearlocs may struggle finding success even on Day 2 of their adventure! Don't be disheartened! TMB was designed to be quite challenging. When we suggest that first-time adventures should ask the guards for help (on day 2), we mean it! We also understand that it can take some time to fully grasp the intricacies of TMB and each Gearloc. Therefore, we have developed 3 play modes to help you get your feet wet. You may want to start your adventure in the first mode until you find yourself being challenged to a degree that is comfortable for you, and then adjust accordingly.

*TMB is a game that requires you to learn and adapt. Oftentimes this learning comes through brutal battles and party KO's. If this is not your style of play or hampers your enjoyment of the game, hang out at the Greenhorn level as long as you like, or feel free to modify it further! Bottom line, make sure you are enjoying the adventure!

Greenhorn Adventurer - Use this mode when just starting out and learning the game.

- Add 2 to your Gearloc's HP Stat before starting Day 1.
- Gain 1 Training Point before starting Day 1.
- If KO'd during your Adventure, dice in your Locked Slots are not removed.

Casual Adventurer - Use this mode when you have a basic understanding of the game.

- Add 1 to your Gearloc's HP Stat before starting Day 1.
- Gain 1 Training Point before starting Day 1.

Seasoned Adventurer - Use this mode when you are ready for the true challenge of TMB!

- No candy-coated Gearlocs.
- No training freebies.
- Too Many Bones, straight up.

STOP & READ!!!

You are through the hardest part! It's now time to learn the rest by jumping into a game of Too Many Bones! For this example, you get the pleasure of playing myself and Picket as we walk you through a real battle! Find our 2 Gearloc Mats and go through the Game Set-up on pages 6 and 7. We are off to take down Drellen, so use him as the Tyrant during set-up! This will be a live battle (meaning we want you to follow along in real time with your game mats as we go through it)! See you shortly!

LIVE BATTLE

Well, hello again! Do you have the play area set up and ready to go? Normally, before you choose a Gearloc, you would want to read over their Gearloc Reference Sheet to better understand how that Gearloc plays - we are all so different! For now, you'll just have to trust me that I'm the best choice. Ha! But enough about me; let's get started!

You may want to select someone in your party to serve as a "Party Leader" to help make those tough decisions that the group cannot decide on. In this example, I shall nominate myself as the most apt leader!

Hopefully you have chosen Drellen as your Tyrant (since that's who we are headed to take down)! Let's check to see if you have your Encounter Deck set up correctly! You should have Special Encounters 001-003, then a total of 8 shuffled Encounters, which should include Drellen's Tyrant Encounter. Yes? Awesome!

We will be facing bogs, goblins, and beasts on this adventure. If you have those types shuffled and set as your Active Baddie Stacks, and the Day Counter set at 1, then we are ready to draw our first Encounter! As we go through things, try to mimic as much as possible so you can better understand all aspects of the game!

Day 1

Picket draws the top Special Encounter: "Leaving Obendar." After reading the card, the party chooses to "Shake down a shady peddler!" This is a peaceful encounter with no extra requirements for success. This means they can move right to the Reward Phase. Picket and Boomer each draw 2 cards from the Loot pile. Picket chooses the Infused Incense, and Boomer chooses the Stone Hammer, discarding the others.

Each Gearloc also gains a Training Point. Picket chooses to train in Dex. Training in Dex always succeeds, so he places a Stat Die, set at 1, in his Dex slot. Boomer already starts the adventure with the Element, Casing, Fuse, and Boom Counter Skills (see her Innate), but she has no specific grenades yet. She decides she wants the option to throw a grenade in her first battle if she can. Boomer trains in Frag Grenade and places the Frag Skill Die (#5) on her mat in the Frag Skill slot. The party also gains a Progress Pt. They place this card, with the point showing, under the Tyrant Card to track their progress. Only 5 more Progress Pts (within 9 days) are needed to reach Drellen!

Whew, Day 1 is almost done! Nice work! All we have left is the Recovery Phase! No need for Picket and I to trade loot, and there's nothing to Lockpick; therefore, we are just down to our individual options. Since we are both at full HP and we like our loot, I think we will both opt to "Scout the area!"... (45 minutes pass)... Hah! I beat Picket back! With my roll of 3, I scouted a 1Pt Bog Frog, and Picket's dud roll of a 1 uncovered a 1Pt Bog Pole. I like our chances with these two; no need to avoid them! Time to nap and then get outta here! Rotate that Day Counter to Day 2!

Day 2

After drawing and reading their second Special Encounter, "Hardly out of the Gate," the party decides to go with the first choice: "Hail the guards for help." This choice will result in a battle, and there are some beneficial conditions that go along with their choice.

Note: A battle's difficulty greatly depends on the party size and Baddies you face! Certain days and Baddie combinations can result in a very tough battle! During battle, your Gearloc(s) may be Knocked Out (KO'd) from losing all HP. If there are no surviving Gearlocs at the end of battle (all Gearlocs KO'd), there will be no Progress or Rewards for that day, and the Encounter Card is discarded. You will begin the next day (increase Day Counter by 1) by drawing a new Encounter card. Don't give up! Losing a battle (or failing a peaceful Encounter) is part of the adventure!

Yes! We are headed into a battle! Every battle is shaped by your party size, total days you've been adventuring, and any modifications in your Encounter. Since there are no specific Battle Queue (BQ) rules on this card, we are going to need to build our BQ by calculating our Baddie Pts. Do you remember how to do that? **Current Day x Number of Gearlocs in Party**. Simple! For us it's Day 2, it's just Picket and I, and there are no other mods, so that's $2 \times 2 = 4$. Yeah, I just did that in my head. I'm gifted.

Thanks for that, Boomer. *sigh* Now that we know our Baddie Pt total is 4, we need to set up our BQ! We must draw Baddies starting with the largest Pt stack possible. If our total was 6, we would draw a 5Pt Baddie and a 1Pt Baddie to total 6. With 4, however, we will be drawing 4 1Pt Baddies. Remember, the BQ is set up with the highest Pt Baddies on top, in descending order, to the lowest Pt Baddies on the bottom. For us, they are all equal so it will be the Bog Frog, then the Bog Pole, and then 2 Baddies we have yet to see.

Let's see who else we are up against! Normally this part is random, but for this example, prepare your BQ with the following Baddies: Goblin Sandbagger on the bottom, then a Clay Golem, next the Bog Pole, and finish the BQ stack with that big ol' Bog Frog on top! Before listening to anything else Picket has to say, see if you can place these Baddies on the Battle Mat correctly (including Health, Lane Markers, and Baddie Initiative Dice).

No really, STOP reading and try to set up your Battle Mat. Picket will still have something to say when you return... I promise.

Boomer, lighten up! I want to make sure they understand! Remember, up to 4 Baddies can battle at one time. The first Baddie from the top of the BQ will take a Lane 1 Baddie Melee or Range position depending on its Attack Form. The second Baddie will go in Lane 2 and so on. When placing these Baddies on the Battle Mat, first place their HP stack, then the Lane Marker that corresponds to the Lane they are in, and then the Baddie chip itself. Also, set the Baddie's Initiative using the Baddie Initiative Die that matches the Lane it's in.

Ok, ok! Since you're STILL TALKING, I'll add this: If there are more than 4 Baddies in the fight, the rest of the Baddies remain face down in the BQ and off to the side of the Battle Mat. If one of the 4 current Baddies is defeated, the next Baddie in the BQ will come out once the current round ends. Remember, when bringing this Baddie into battle, use the first available Lane Marker and Baddie Ini Die. Now, Picket! No more talking! And you with your hands on this rulebook! Try setting up the Battle Mat and let's see how you did on the next page.

Battling 4+ Baddies Reminder

During battle, if a Baddie cannot enter the Battle Mat because its position is occupied, it will instead take the first available Baddie position (starting with Lane 1-4) that matches its Attack Form. Then, it will try the opposite Attack Form.

Baddie Initiative Reminder

During battle set-up, for each Baddie that enters the Battle Mat, set the corresponding Baddie Ini Die to reflect the Baddie's Initiative and place it on the Ini Meter. Initiative tie-breakers with Baddies and Gearlocs are decided by the party. If a unit joins the fight after Round 1, it will ignore this starting Ini number and instead be placed at the top or bottom spot of the Ini Meter. 1Pt and 5Pt Baddies start at the bottom spot, 20Pt and Tyrant Baddies start at the top spot.

How did you do? Adjust if you need to! Next, it's time for Picket and I to join! As you can see from the image, Picket has chosen Lane 4. I am going to play it safe and set up right behind him! We had some unlucky Initiative rolls...I blame our party leader. Go ahead and set our chips and Initiative Dice to match the image!

Gearloc Placement and Initiative Reminder

Gearlocs are always placed onto the Battle Mat after the Baddies. All Gearlocs roll their Initiative Dice and place them into the Ini Meter, along with the Baddies, in descending order. Then, each Gearloc is placed, along with their current HP stack, onto a Gearloc position that matches its Attack Form.

Great job! One more thing before we get this battle started! Picket has an Innate Skill that allows him to open with Shield Wall before battle begins! Let's see how he does!

Picket rolls his 2 Dice and lands only 1 and a . he locks the Def in one of his Active Slots. Shield Wall does not allow the to be used, so it is placed back into the dice pool.

Rotten oggots! I usually roll better than that. Ah well, we have help because as Round 1 begins, our Encounter choice condition kicks in! Each Baddie is dealt 1 True Dmg from the Obendar wall guards. Go ahead and remove 1 HP from each Baddie. Now the battle can begin. It looks like the Goblin Sandbagger is first!

This Baddie has Ranged Attack Form, so it does not move and it targets Boomer. The Goblin Sandbagger rolls 1 Die and 1 Die. The Atk Die rolls a and the Def Die rolls a 1 . The triggers Mischief 1 (defined on the Gearloc Adventuring Reference Guide) which forces Boomer to remove a die from her Active slot. She does not have one, so this does nothing. Also, since the goblin did not roll any Dmg, it does not hurt Boomer. Place the 1 it rolled on the goblin Baddie chip. The goblin's turn is now over.

Baddie Movement and Targeting Reminder

Melee Baddies may move up to 2 adjacent positions per turn. They will always move toward and attack the closest (route with fewest positions) opposing unit. If there is a tie for "closest", use its to determine which it pursues. If a Melee Baddie is already adjacent to an opposing unit, it will not move. Ranged Baddies do not move and can target any opposing unit on the Battle Mat.

It's my turn next! Yee-hoo! I'm not going to move, which allows me to use all 3 Dex for dice rolling! It looks like I have 6 dice options to choose from: an Element, Casing, Fuse, 1 Die, and 2 Dice. In order to use my Frag, I need to get my Boom Counter to 1 by finding 1 of each Component! I think I'll target the Bog Pole and will roll 1 Die, 1 Die, and my Element Die. Here we go!

Boomer rolls 2 Elements, 1 , and 1 (with her Def Die). She chooses to apply the Dmg from the Atk Die to the Bog Pole. With the , Boomer also decides to use her Backup Plan: Throw Odds, which allows her to do an additional 1 Dmg to her target. This means the Bog Pole is defeated. Remove Bog Pole, along with its Lane Marker and Baddie Ini Die, from the Battle Mat and place it in the Defeated Baddies area. Finally, Boomer places her 2 Elements result in one of her Locked slots. She now has 1 of the 3 needed Components toward making a grenade.

Picket! Did you see that? I KNOW you saw that! Nailed that pole right in the kisser with the bolt I was going to use for Frag shrapnel! If you were half as accurate with your sword...hehe...I'll stop there because we are in the middle of a battle! FOCUS! One Baddie down! But no celebrating yet, that Bog Frog is next!

The Bog Frog moves 2 positions towards its closest target (Picket is 3 positions away, and Boomer is 4). Go ahead and move it to either position adjacent to Picket. The Bog Frog does not have any dice to roll, but it does have a Skill that triggers each turn. In this case, place a Poison Effect Die, set at 2, on Picket's chip.

Next up is Picket (it would have been the Bog Pole, but it was defeated before it could have a turn). At the start of Picket's turn, he immediately takes 2 True Dmg (ignoring his Defense) from Poison (remove 2 HP from Picket) and decreases the Poison Effect Die to 1. Since Picket still has a Die in his Active slot, it is not available to roll. Picket chooses to use his Loot: Infused Incense. This adds 2 additional Atk Dice to his roll for no Dex cost. He chooses the Bog Frog as his target since it is already adjacent to him and rolls 3 Dice and 1 Die.

Picket's roll results in a total of 2 , 1 , and 1 . He places the in his Backup Plan, places the Def Die in his Active slot, and applies 2 Dmg to the Bog Frog (remove 2 HP from it).

Don't fret, Boomer, I've got this! This battle is practically over already! That frog will soon take another guard arrow so it be decimated before its next turn. I, of course, am still very healthy, and my awareness of this battle and its remaining dangers is unmatched! Just one more Baddie this round and it's only a...ugh...ouch...a Clay Golem...as I suspected!

The Clay Golem pursues the closest opposing unit. When moving the Clay Golem, there are possibly 2 positions you could move it to (depending on how you moved the Bog Frog). Move the Clay Golem toward Picket.

Note: With the round over, if there was a Baddie still in the BQ, it would enter the Battle Mat at this time using the Lane 2 Marker and Ini Die.

Increase the Round Counter to R2, and remove 1 HP from all Baddies (for the Encounter condition).

OK! With the first round under your belt, it's time for you to play out the rest of the rounds in this battle! See how well you can navigate the remaining Baddie and Gearloc turns. Better read up on what the Clay Golem's Skill "Break" does. It can be nasty! Thankfully, both yours truly and Picket will take our turns first! Good luck!

GETTING TECHNICAL

This game has a lot of details! Sometimes saying things in just a little different way makes all of the difference. We've searched the forums and our direct e-mails for some of the more common questions (and answers) people have submitted. Some of the answers come directly from other TMB owners who did an excellent job of clarifying things in a way that seemed to resonate with people (thanks everyone).

- **Atk and Def Dice in Backup Plan: Do Attack and Defense Dice in my Backup Plan count against my Attack and Defense Stat?** (asked by Tony B)
No, Atk and Def dice in your Backup Plan do NOT count against your Atk and Def Stat.
- **Backup Plan Extensions: How does a Backup Plan Extension work (found on certain Trove Loot)?** (asked by Sara J)
A Backup Plan Extension is an item that gives you more Backup Plan options. Just like your Gearloc's current Backup Plan Skills, there is a ⌘ cost involved when using this new Backup Plan Extension. That cost is listed on the card.
- **Baddie Movement: How does Baddie Movement work?** (answered by Tyler R)
Melee Baddies always move to the closest target in the shortest distance possible. If two targets are equidistant from the Baddie, use the Baddies' preference (weakest / strongest) to determine which target it moves to. If there is a tie (both are same strength) players decide. If it is already adjacent to a target, it will not move, even if there is a more "optimized" position (i.e. a spot where a multi-target Baddie could attack two creatures). The Baddie does not optimize its movement. Meaning it does not move in a way to maximize its attacks.
- **Poison: How does Poison work if I'm hit with it multiple times?** (answered by Soka S)
Poison is not cumulative. Rather, the counter will always be set to the more recent Poison Effect value being applied. For example: If you have a Poison 2 Effect Die on you, and a Baddie with Poison 1 targets you with that Skill, your Poison Effect Die should be set to 1. The same is true in reverse - Poison 1 can be bumped to Poison 2 if that's what came second.
- **Search for Loot: Can a partially "used" Loot (one with multiple charges) be chosen to Search for better loot?** (asked by Jamie S)
Yes, as long as the Loot or Trove Loot takes up a spot in your Loot Area, it can be used to "Search for Better Loot."
- **Skill Timing: What is the timing of different Skills that happen at the beginning of a Baddies turn? Example: A Baddie has one HP left. It has Recover (#1) and is Poisoned (#1).** (answered by Shannon M)
Anything that happens at the same time (i.e. beginning of the turn effects) happen in the order of the player's choosing. So you can choose for the poison to hit before the recover does!
We (CTG) will add that the "player's choice" ruling in such situations is very intentional and meant to be part of the strategy for taking down your opposition. Mulmesh is a great example of a Tyrant where this rule can greatly effect the battle's outcome depending on what Effects are in play at just the right time.
- **Targeting: Can I choose a target to roll my Attack dice and a different target for my Skill die and a different target for my damaging Backup Plan?** (answered by Tyler R)
No, if a Skill, Backup Plan, or Attack has the word "Target" in the description, then it must be used on the same target. You only get one target per turn, which is declared before you choose which dice are rolled. That being said, if a Skill or Backup Plan does not use the term target (such as Boomer's Frag Skill), then that Skill / Backup Plan does not need to be used on the same Baddie as your target.

Here are some other common FAQ's we wanted to call out and answer for you.

- **Atk and Def Dice Pool: What is a dice pool? What if all Def Dice are in use?**
Your party shares the same general Attack and Defense Dice (white) that are used by the Baddies. Once in great while, the Def Dice pool may run out (from dice on Baddies, Gearlocs, or in Backup Plans). If a party member runs out of Def Dice to roll, others should exchange Def Dice ⌘ in their Backup Plans for Atk Dice ⌘ to accommodate.
- **Attacking: What does it mean to "Attack" (for Baddies and Gearlocs).**
Attacking is the act of rolling Atk Dice (white) on a target. Rolling Skills is not considered an "Attack" even if Skills do Dmg.
- **Baddie Skills with no "#": Some Skill definitions mention a "#", but I see no "#" on some of the Baddie Chips. Why is this?**
Skills with no # are considered to be in their most basic form (i.e. Lashback is Lashback 1).
- **Baddie Active Stacks: I had to search for a Baddie in my Active Stacks, what happens now?**
Some Encounters require you to face a specific Baddie or type, once found, shuffle your Active Stacks (except for any scouted Baddies) and place your scouted Baddies back on top of the stacks.
- **Break and Corrosive: How do they work exactly? Is it different for an individual or group?**
The Skill "Break" forces you to Exhaust an Atk die that did Dmg to this unit. The act of Exhausting this die reduces your Atk Stat by 1 for this battle. The actual Atk die that is Exhausted is there to remind you of this. Corrosive triggers when this Baddie attacks. At that point, all Def Dice that remain (after applying Dmg) in a target's Active slots must be Exhausted.
- **Encounter Deck is Visible: I can see the color and title of our next Encounter, is that ok?**
Yes. Most Encounters will still be a surprise. If you want total surprise, you can cover the deck.
- **HP vs Buff HP: What is the difference?**
A Gearloc's current HP is the amount of Health Chips your Gearloc literally has underneath it. Buff HP goes in a Gearloc's Prep Area and is not related to a Gearloc's HP. When determining weakest or strongest targets in battle, only use HP. Heals in TMB affect HP (not Buff HP) and cannot exceed Max HP. Likewise, True Damage affects HP (not Buff HP).
- **KO'd Gearlocs: When I am KO'd, can I do anything at all?**
When KO'd, you've been knocked out and cannot contribute to the battle any longer unless you are Revived (a unique Gearloc Skill your party may or may not have access to). Usually, when a player is KO'd, they become the person that rolls for and moves the Baddies. This helps move the battle along. Or, it's time to get yourself some popcorn.
- **Multi-target Target Selection: If a Baddie has multiple targets (☹) or (☹), who will it target first?**
This Baddie will target the weakest, then the next weakest. On ties, party can choose.
- **Reviving Gearlocs: How does Revive work?**
Currently there are 2 Revive Skills in TMB, both belong to Patches. Liquid Life, if in a Gearloc's Active slot, will prevent that Gearloc from being KO'd. Otherwise, both Liquid Life and the Zappack allow Patches to bring a Gearloc back into the battle with # HP (as described on the back of Patches Reference Sheet).
- **Rolling Attack Dice: As a melee unit, can I roll Atk Dice (for a chance to roll Bones) even if I'm not adjacent to a Baddie?**
No. Gearlocs, like Baddies, must have a target within attack range in order to attack (roll their attack dice).
- **Trading Loot while Lockpicking: Can we trade Loot after someone has made a Lockpicking Attempt?**
Yes. Loot trading can happen any time during your Recovery Phase, even while in the process of Lockpicking.
- **Untargetable Units: Can Untargetable units still be damaged?**
Yes. Untargetable units cannot be targeted but they can still take damage in other ways.

Further FAQ type questions will be handled on BGG and here: toomanybones.com/rules

RULES/TERMS INDEX

TMB ADD-ONS

PLACE YOUR CURRENT TYRANT CHIP
RIGHT ON THE MAT

Adventure Map

Track your Days and Progress Points.

SLOT YOUR DAY COUNTER CHIP IN
THE CUT OUT AREA AND EASILY TURN
IT TO TRACK YOUR DAYS.

TMB Premium Health

65 heavy 11.5 gram HP chips!

Control 'Ur Roll Dice Tray

Unsnaps and lays flat
to fit in your game box.

Removable Dice Storage Trays

Locks in and protects up
to 40 16mm dice.

Tink Character

Nugget Character

Ghillie Character

You've got to
try out some of
these Add-ons
if you don't already
own everything TMB
related! If nothing else,
please pick up Ghillie,
he's such a loner and
needs a friend!

Each Add-on Character comes
with 1 Die-cut Gearloc Mat,
16 Skill Dice, 1 Initiative Die,
4 Stat Dice, 1 Gearloc Chip,
a Removable Dice Storage
Tray, and a Reference Sheet!

Significant progress toward better things can rarely be achieved without creating new evils that require new remedies. So the cycle of progress goes. New ideas, blind to the past, fuel a perpetual evolution until what remains is only a faded remnant of what was.

Daelore knows this pattern well. Its lands and its history have been wounded by the technological pursuits of its inhabitants. Is repair possible? That answer is not yet written. Maybe it will be soon.

What be you, adventurer?
An /evil, or a /remedy?
